

Assignment 6:

Objective:

Build a simple **CRUD (Create, Read, Update, Delete) application** using **ReactJS** with **Zustand** for state management.

Requirements:

- Create a Zustand store to manage application state
- Use actions to **add, update, delete, and read** data
- Handle complex state (objects / arrays) inside the store
- Persist data using Zustand persist middleware (localStorage)
- Use devtools middleware for debugging
- Connect Zustand store with React components

Features:

- Add new items (Create)
- Display list of items (Read)
- Edit existing items (Update)
- Delete items (Delete)
- Persist data on page reload

Expected Outcome:

- Proper use of Zustand store, actions, and middleware
- Clean and structured store design
- Functional CRUD operations with persistent state
