

Assignment 5

A) Notification System :-

Redux Toolkit: Actions like addNotification, removeNotification, clearNotifications.

React-Redux: Share notifications globally (accessible in Navbar, Sidebar, etc.).

Technical Stack:

- React (TypeScript)
- Redux Toolkit → Handle adding/removing/clearing notifications
- React-Redux → Provide global access to notifications
- Tailwind CSS / MUI → Stylish notification cards and animations
- Optional: Framer Motion → For entry/exit animations

Scope:

- Add notifications globally (success, error, info, warning).
 - Auto-dismiss notifications after a few seconds.
 - Option to manually dismiss notifications.
 - Display notifications anywhere in the app (Navbar, Sidebar, modals, etc.).
 - Optional: Queue notifications if multiple are triggered simultaneously.
-

B) Quiz App :-

Redux Toolkit: Actions like answerQuestion, nextQuestion, resetQuiz, setQuizData.

React-Redux: Share current question, score, and quiz progress globally.

Technical Stack:

- React (TypeScript)
- Redux Toolkit → Manage quiz flow, current question, score, and state transitions
- React-Redux → Provide global access to quiz data across components
- Tailwind CSS / MUI → Build a clean, interactive quiz UI
- Optional: Add progress bar, countdown timer, or entry/exit animations

Scope:

- Answer multiple-choice questions.
- Track score and current question globally.
- Show results and summary at the end.
- Support restarting the quiz anytime.
- Optional: Shuffle questions, show hints, or include timed quizzes.
